UNIVERSAL WORKLIST

“We’ve known the team at Sirona for the better part of the last five years. Sirona’s Business Continuity solution is a game-changer for us, ensuring our radiology services remain uninterrupted during system downtimes. The modern architecture of Sirona’s system, combined with their team’s expertise, makes any integration seamless. They truly stand out from other vendors, and we’ve been very impressed with their competence and responsiveness.”

Matt Long | Chief Technology Officer, Radiology Associates of North Texas

Radiology without interruption

By integrating Sirona with your practice HL7 and DICOM connections, we seamlessly ingest your data. This ensures that, even if your primary system goes down, Sirona provides continuous access to your radiology services, maintaining smooth and efficient operations.

Cloud-native architecture built for resilience

Our cloud-native infrastructure eliminates dependency on traditional hardware, significantly reducing downtime risks. Enjoy seamless access to radiology tools and data from anywhere.* Experience the future of radiology with robust, resilient performance.

“When you’re evaluating software in the radiology space, anyone who ultimately makes a decision to invest in software that doesn’t have the ability to be cloud-native is just wasting dollars.”

Chris Patrick | CEO, Inland Imaging

Always on

Ready for any planned or unplanned downtime

Real-time monitoring

Addresses issues early

Our 24/7 real-time monitoring system identifies and addresses potential issues before they impact your workflow, supported by a dedicated team of experts ready to assist at any moment.

Scalability & flexibility

Adaptable to your needs

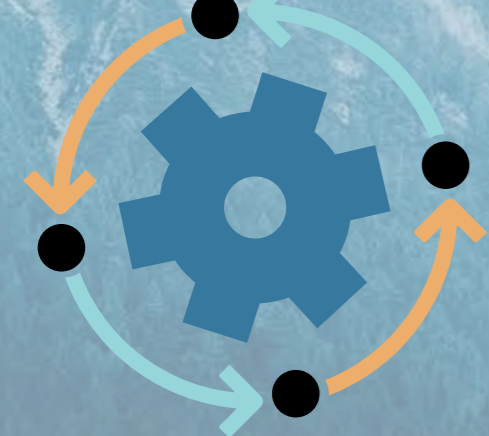

Whether you’re expanding services or facing a sudden increase in demand, Sirona scales effortlessly to meet your needs, ensuring continuous and efficient radiology operations.

Enhanced security measures

Securing your practice

With advanced security protocols, Sirona protects sensitive patient data, maintaining compliance with industry standards and safeguarding your practice against cyber threats.

Continuity you can trust

Ready for anything

Trust Sirona to keep your radiology services running smoothly, no matter the circumstances. Experience the peace of mind that comes with knowing your practice is prepared for anything.

“Imagine having only one database to run your application. If that database goes offline – whether for planned maintenance, an unplanned outage, or an upgrade – your entire application would be offline. This is typical of an on-premises or lift-and-shift model.

In contrast, a cloud-native model runs the same database virtually across multiple machines simultaneously, providing built-in fault tolerance. This means the essential layers of infrastructure required for the application are inherently distributed and resilient. With a cloud-native approach, there are no planned downtime windows because everything is designed to be continuously available and upgradeable online.

This is a stark contrast to the traditional multi-hour downtime for upgrades, which can significantly disrupt workflows and negatively impact patient care.”

Jeff Queisser | Co-Founder of Box [NYSE: BOX] and Technical Advisor to Sirona

Discover the Sirona Difference

Sirona’s cloud-native architecture enables continuous innovation without any downtime. Developed by top technology leaders and seasoned radiology IT veterans, and refined through collaboration with five of the top 50 private practices in the US, Sirona’s platform is expertly crafted to keep your practice ahead now and in the future.
